

PRESS RELEASE – 25 April 2005

At the recent ISA exhibition in Las Vegas HEXIS USA announced the introduction of an enhanced range of self-adhesive vinyl media with PE-liner together with a new set of colour profiles for the MUTOH Falcon II Outdoor eco-solvent plus printer.

The V250 is a 70 micron high performance white gloss vinyl whereas the V350 is a 80 micron intermediate white gloss vinyl.

Both the V250 and the V350 carry a grey adhesive for increased opacity and feature a newly developed polyethylene coated release liner. The conventional clay coated paper liners found on lower cost self-adhesive vinyl films tend to dry out and start cockling because of the printer heating. The new PE-coated backing paper has overcome this problem ensuring greater stability and improved printability.

The new MICRO2 is a micro-perforated see-through window film featuring full colour graphics capability on the outside and one-way visibility from the inside. The MICRO2 is suitable both for vehicle and for building applications.

All products are endorsed by MUTOH and suitable ICC colour profiles for ONYX PosterShop 6.0 are available for download from the HEXIS website or from the Support pages of the Mutoh website. The colour profiles are the result of a close cooperation between the HEXIS Inkjet Laboratory and MUTOH.

HEXIS is a major manufacturer of coated and uncoated self-adhesive media for digital printing as well as of a complete line of graphic vinyl (high performance, translucent, reflective, ...).
